AIR POLLUTION ACT 1987
APPLICATION FOR AIR EMISSION LICENCE (Industrial Plant)

<p style="text-align: center;">(BLOCK CAPITALS)</p> <p>1. (a) Name and Address of Applicant:</p>	
<p>(b) Name and Address of Agent:</p>	
<p>(c) Telephone Number of Agent:</p> <p style="padding-left: 40px;">Telephone Number of Applicant:</p> <p style="padding-left: 40px;">Planning Register Number:</p>	
<p>2. Name and address of the premises from which the emission(s) is/are to be made:</p>	
<p>I hereby make application for a Licence pursuant to the provisions of the Air Pollution Act, 1987 and the Regulations made thereunder.</p> <p>Signature of Applicant: _____ Date: _____</p>	
<p>3. Give a general description of the process or activities giving rise to the emission(s)</p>	
<p>4. (i) Location of point(s) of emission(s) (To be shown also on a 1/1000 layout):</p> <p>(ii) Details of size and construction of all outlets (Plan & Elevations in triplicate indicating the premises, source of emissions, diameter and point of emissions, ducting systems and any works apparatus or plant from which the emissions are to be made must accompany this application form):</p>	
<p>5. Details of any impact study of emissions from the plant.</p>	

6. Details of Emissions

A separate (Characteristics) sheet shall be completed in respect of each identifiable point source of regular emission to the atmosphere such as boiler stacks, incinerator stacks, process vents, storage venting, and extract vents which are designed to remove heavily contaminated work-space air to the external atmosphere.

1. (a) Nature of emission & date of commencement	
(b) Location of emission	
(c) Volume of emission (m ³) (i) average rate per day (ii) maximum rate per day (iii) maximum rate per hour	
(d) Period of emissions during each day	
(e) Means of control of emissions.	
(f) Temperature of emission (°C): Humidity of emission:	
(g) Height of vent, flue, stack or outlet over ground level.	
(h) Average concentration in ambient air.	
(i) Type of fuel used.	
(j) Seasonal variations, if any, of emissions.	
(k) Details of treatment, if any. N.B. Best practicable means must be used:	
(l) Details of monitoring-frequency and methods. Specify types of gauge meters or other apparatus.	
(m) Details of any special arrangements to prevent accidental emissions.	
2. Characteristics of emissions, physical, chemical and other, should be listed for each and every point of discharge to the atmosphere on the attached summary sheet. Concentrations should be expressed in mg/m ³ for all parameters where relevant.	

7. Characteristics of the Emissions

Complete for all applicable characteristics giving concentration ranges where available.

Concentrations to be expressed in mg/m^3 where applicable. The following list is meant to be indicative only – such other physical, chemical or other characteristics as are pertinent to the emission in question should be specified.

Characteristic	Prior to treatment	As discharged 30 minute mean
Temperature °C		
SO ₂		
HCl		
NO _x		
Dusts (specify each) giving Composition Toxicity and TLV		
Solvents (specify each) giving Toxicity and TLV		
CS ₂		
H ₂ S		
Cl ₂		
NH ₃		
CO		
Organohalogen Compounds (Specify)		
Other toxic substances (Specify)		
Other Carcinogenic, Teratogenic or Mutagenic Compounds to include suspect materials		
Metals (Specify each): (a) Cadmium Mercury		
(b) Arsenic, Lead, Chromium		
(c) Nickel, Copper		
(d) Manganese		
Any other compounds of significance Dioxins and Dibenzofurans as 2, 3, 7, 8 – TCDD equivalent		
<p>The applicant shall list the relevant characteristics of the emissions from each point of emission to the atmosphere as identified in Part A, 4(a).</p>
